**MH370 Experts Think They've Finally Solved The Mystery Of The Doomed Malaysia Airlines Flight**

---

15/05/2018

All but one of the 239 people on the doomed Malaysia Airlines Flight 370 had probably been unconscious - incapacitated by the sudden depressurization of the Boeing 777 - and had no way of knowing that they were on an hours-long, meandering path to their deaths.

Along that path, a panel of aviation experts said Sunday, was a brief but telling detour near Penang, Malaysia, the hometown of Capt. Zaharie Ahmad Shah.

On two occasions, whoever was in control of the plane - and was probably the only one awake - tipped the craft to the left.

The experts believe Zaharie, the plane's pilot, was taking a final look.

That is the chilling theory that the team of analysts assembled by Australia's "60 Minutes" have posited about the final hours of MH370.

They suspect that the plane's 2014 disappearance and apparent crash was a suicide by the 53-year-old Zaharie - and a premeditated act of mass murder.

But first, the experts said, they believe Zaharie depressurized the plane, knocking

out anyone aboard who wasn't wearing an oxygen mask. That would explain the silence from the plane as it veered wildly off course: no mayday from the craft's radio, no final goodbye texts, no attempted emergency calls that failed to connect.

That would also explain how whoever was in control had time to maneuver the plane to its final location.

The wreckage has not been found, though hundreds of millions of dollars have gone into the four-year search. The secret of what happened in the final moments of the ill-fated flight - and the motive behind it all - probably died with its passengers and pilot.

But the "60 Minutes" team - which included aviation specialists, the former Australian Transport Safety Bureau chief in charge of investigating MH370's crash and an oceanographer - put forth what they believe is the most likely theory.

"The thing that gets discussed the most is that at the point where the pilot turned the transponder off, that he depressurized the airplane, which would disable the passengers," said Larry Vance, a veteran aircraft investigator from Canada. "He was killing himself. Unfortunately, he was killing everyone else onboard. And he did it deliberately."

Zaharie's suspected suicide might explain an oddity about the plane's final flight path: that unexpected turn to the left.

"Captain Zaharie dipped his wing to see Penang, his home town," Simon Hardy, a Boeing 777 senior pilot and instructor, said on "60 Minutes."

"If you look very carefully, you can see it's actually a turn to the left, and then start a long turn to the right. And then [he does] another left turn. So I spent a long time thinking about what this could be, what technical reason is there for this and, after two months, three months thinking about this, I finally got the answer: Someone was looking out the window."

"It might be a long emotional goodbye," Hardy added. "Or a short emotional goodbye to his home town."

Flight 370 disappeared March 8, 2014, shortly after leaving Kuala Lumpur, with 239 people aboard who believed they were bound for Beijing.

The craft is thought to have crashed in the far southern Indian Ocean.

The governments of Malaysia, China and Australia called off the official search in January 2017. The Australian Transport Safety Bureau's final report said authorities were no closer to knowing the reasons for the plane's disappearance or the exact location of its wreckage.

But the "60 Minutes" experts tried to answer one of the biggest questions surrounding the flight: How could a modern aircraft tracked by radar and satellites simply disappear?

Because, they say, Zaharie wanted it to. And the veteran pilot, who had nearly 20,000 hours of flight experience and had built a flight simulator in his home, knew exactly how to do it.

For example, at one point, he flew near the border of Malaysia and Thailand, crisscrossing into the airspace of both, Hardy said. But neither country was likely to see the plane as a threat because it was on the edge of their airspace.

"Both of the controllers aren't bothered about this mysterious aircraft because, oh, it's gone, it's not in our space anymore," Hardy said. "If you were commissioning me to do this operation and try to make a 777 disappear, I would do the same thing. As far as I'm concerned, it's very accurate flying, and it did the job."

Still, as News.com.au wrote, the experts' hypotheses are just theories - and not entirely new ones.

Zaharie and co-pilot Fariq Abdul Hamid were prime suspects in the plane's disappearance from the beginning. There were rumors that Zaharie's marriage was ending and that he downed the plane after learning that his wife was about to leave, the news site said.

Another theory was that he hijacked the plane in protest of the jailing of Anwar Ibrahim, who was then the opposition leader in Malaysia.

A group called the Chinese Martyrs' Brigade claimed responsibility for the downing, although skeptical officials called it a hoax.

Two men on the plane were flying with phony passports, but one was apparently an asylum seeker, and neither had terrorism links.

The wreckage, of course, might provide some insight about what caused the airplane to crash, and crews were still looking for it as recently as this year.

The latest attempt to discover it was a \$70 million effort by a Texas company called Ocean Infinity, according to the Associated Press. The mission scanned 500 squares miles a day during a three-month search.

Ocean Infinity CEO Oliver Plunkett said the company's technology had performed "exceptionally well" and collected "significant amounts of high-quality data."

Still, it found no trace of MH370.
